

# Modulex Billund Design Vinyl

Over the last years, we have seen the traditional signage business move towards a more decorative trendy décor that fits perfectly with different demands of interior environments such as wall and window decorations in our sector. We strongly believe that the redesign of interiors can become an added value to this sector.

*“Get your creative juices flowing by trying out new ways to upcycle”*

Modulex Billund Design Vinyl is a flexible self-adhesive vinyl that can be used to create stylish and durable surfaces in new interiors or used for redesign.

The collection is designed for a wide variety of projects including healthcare, retail, corporate and educational facilities.

## Limitless options

It includes 50 different designs of vinyl split into eight categories being wood, marble, solid colours, metallic, natural stone, fabric, glitter, and leather.

## How does upcycling help the environment?

- It reduces the need for using new or raw materials to produce new items.
- It reduces the amount of discarded materials and waste being added to landfill each year.
- Encourages creativity and innovation.

Incorporating and embracing upcycling processes in design will also offer many advantages not only to the designers, but also to the environment.
